## SUMMARY

I am a Ph.D. student at UC Irvine studying Systems and Control under the supervision of Professor Faryar Jabbari. I have an education background in mechanical engineering, especially on optimization and control theory. My current interest is multi-agent systems, anti-windup control, event-triggered control, linear parameter varying systems, distributed optimization on graphs, and control barrier functions.

## ACADEMIC EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                         |                                         |                |

| Program Language:       | Matlab, Python, C/C++, Shell, LaTeX, HTML                                                                                                                                                           |
| Control Theory:         | PID Control, Nonlinear Control, Robust Control ( $H_\infty$ , $l_2$ gain and gain scheduling), Event-Triggered Control, Control Barrier Function, Multi-Agent System, Anti-Windup Control, MPC, LQR |
| Mechanical Engineering: | 3D printing, CAD(Solidworks), Lagrangian Mechanic, System Model via first principle, System Identification via Bode Plot, Linear Time-Invariant System,                                             |
| Electric Engineering:   | Micro-Controller Develop (Arduino, STM32, RaspberryPi), PCB desgin(Altium Designer, Easy EDA, KiCad), Oscilloscopes, Soldering, Circuits and Signals, Power and Energy System (AC,DC), DSP          |
| Optimization:           | Convex Optimization, Semi-definite Programming, Numerical Methods (Augmented Lagrangian, Interior Point Method, variations of Newton's method), ADMM                                                |

LANGUAGES

English: Professional proficiency  
Mandarin: Native speaker
